

All Zentauri herbal smoking blends contain perfectly balanced ingredients. Many of the herbs used have a long tradition in Native American culture, their consistent quality guaranteeing maximum enjoyment. Pure or blended with other substances, they were smoked or burned in rituals and ceremonies. Knaster has been a patented brand in Europe since 1996. It offers a range of herbal smoking blends, which are governed by the Food Act. Although they are not sold as tobacco or tobacco products, they have been subject to taxation in the same manner as tobacco since 20 June 2007.

NO TOBACCO AND NICOTINE

All Zentauri herbal smoking blends are free of tobacco and nicotine. The herbal smoking blends undergo a humidifying process permitted by law. Consequently, in contrast to herbal blends left unhumidified, they acquire a distinctly milder taste. The Zentauri herbal smoking blends also have a slow, even burn and produce less smoke. The smoke emanating from burning herbal smoking blends is low in harmful substances. Comparative tests show that they create 50 – 200 times less formaldehyde than tobacco. When tested, the PAH (polycyclic aromatic hydrocarbon is a carcinogen in the condensate) content was below the limit of detection. Inhalation of smoke essentially increases the carbon monoxide stored in the body.

NEU
